PATRICK GÖLER VON RAVENSBURG

Full Stack Web Developer

mail@pgvr.dev | Munich, Germany | pgvr.dev | @patrick_gvr | pgvr | pgvr

EXPERIENCE

Software Engineer

Tanso

December 2021 – Ongoing | Munich

- Fullstack web development using Next.js, tRPC, Chakra, Typescript, Prisma
- Close collaboration with our product lead and the founders
- Creating multiple CI/CD pipelines to ensure a rock-solid release cycle and increased productivity with preview deployments

Thesis Student

SAP

April 2021 – November 2021 | Walldorf

- Explore the potential of Deno as a lightweight and secure-by-default runtime for powering sensitive lifecycle actions within Steampunk Control Plane

Software Engineer (Working Student)

Aioneers

May 2020 – April 2021 | Mannheim

- Built a SaaS from the ground up with Vue and Angular Frontends and Nodejs Microservices managed with Kubernetes
- To achieve product-market fit quick iteration and implementation of feedback was essential while designing an architecture that scales well

Software Engineer (Working Student)

Yasoon

February 2020 – May 2020 | Mannheim

- Frontend devleopment with React and Redux on a well-established product in the Jira Marketplace

Software Engineer (Working Student)

Sovanta

September 2018 – June 2019 | Heidelberg

- Worked on everything concerning the development, management and deployment of Chatbots
- Angular and Redux was used for most frontend parts and Kubernetes for the backend and deployment
- APIs involved were e.g., DialogFlow, SAP Conversational AI and Amazon Alexa
- Deployments and Database management was done with Azure

Software Engineer (Working Student)

APLICONUS

April 2016 – August 2018 | Mannheim

- Worked on Windows 10 Apps with the Universal Windows Platform (UWP)
- Developed Progressive Web Apps (PWA) with Angular and ASP.NET Core

PROJECTS

Synk.so

Side Project

- Bootstrapped this SaaS to automate the import of emails to Notion
- Built with Blitz.js, Stripe, Postgres and the Notion API
- Advanced usage of Inbound Parse Webhooks and Notion API to parse emails to a Notion compatible format
- Automatic scaling with Railway to cover usage spikes

Fireside

Hackathon

- This project had the intention to facilitate "fireside" chats between strangers to combat isolation during the pandemic
- Fully functional call initiation to connect two participants with Twilio calls during a user-defined time window
- Elaborate scheduling system built with MongoDB and Node.js to find suitable time slots for participants to receive calls

Effishent

Enactus

2016 - 2020

- Enactus is a student organization focused on social entrepreneurship
- Part of the Effishent team with the goal to fight malnutrition in developing countries with low-tech hydroponic-systems and innovative business models

EDUCATION

M.Sc. Business Informatics

University Mannheim

Sept 2019 – Nov 2021

Thesis title: Explore the potential of Deno as a lightweight and secure-by-default runtime for powering sensitive lifecycle actions within Steampunk Control Plane

Semester Abroad

University Linköping

Aug 2017 – Jan 2018

B.Sc. Business Informatics

University Mannheim

Sept 2015 – June 2019

Thesis title: Trial Design and Simulation of Event-based pricing for Electric Vehicles

SKILLS

Javascript | Typescript | React | Next.js | Blitz.js | Angular | Vue | Nuxt.js | GraphQL | Apollo | React Query | Node.js | Express | Koa | Tailwind CSS | Chakra UI | Material UI | Figma | Postgres | Prisma | Kubernetes | Docker | Azure | Digital Ocean | Vercel | Railway | and more...
